

ADVANCED NEGATIVE PRESSURE WOUND THERAPY

The Science to Treat Chronic and Acute Wounds

NPWT dressings deliver the following benefits to all patients with chronic wounds

- Simple to use and easy to apply
- Reduces nursing time
- Decreases length of stay at the hospital
- Reduces the infection in effective manner
- Reduces pain before, during and after changing the dressing

- Improves healing process
- Is comfortable, and makes the patient independent
- Offers a cost-effective outcome
- Is used on an outpatient setting

Mechanism of Action of NPWT

- Increases local blood flow
- Reduces edema
- Stimulates the formation of granulation tissue
- Stimulates cell proliferation
- Removes liquids that compromise the wound healing process
- Reduces bacterial load
- Draws the closer wound edges together
- Promotes simultaneous healing of all wound levels

Indications of NPWT

- Burn wounds
- Chronic leg ulcers
- Pressure ulcers
- Diabetic foot ulcers
- Open abdomen including management of fistulas
- Sternal wound infection
- Surgical, non- healing wounds
- Trauma
- Skin grafts

The Main Objective is to manage excessive exudate and promote granulation tissue

Our team members are trained to use the latest generation NPWT devices in a professional manner.
